

# Attention and Automaticity

Spring 2014

1

## Psychological Interpretations of Consciousness

- As Attention
  - Bringing Some Object into Awareness
- As Primary Memory
  - Short-Term Memory, Working Memory
  - Maintaining that Object in Awareness
- Attention as the Pathway to Primary Memory

2

## William James on Attention

*Principles* (1890), Chapter 11

Everyone knows what attention is. It is the taking possession by the mind, in clear and vivid form, of one out of what seem several simultaneously possible objects or trains of thought.

Focalization, concentration, of consciousness are of its essence.

It implies withdrawal from some things in order to deal effectively with others, and is a condition which has a real opposite in the confused, dazed, scatterbrained state which in French is called *distraction*, and *Zerstreuung* in German.

3

## Varieties of Attention

James, *Principles* (1890), Chapter 11

- Sensorial vs. Intellectual
  - Directed toward Objects of Sense
  - Directed toward Ideal or Represented Objects
- Immediate vs. Apperceptive
  - Object Intrinsically Interesting
  - Derived from Interest in Some Other Thing
- Passive vs. Active
  - Reflexive, Involuntary
  - Voluntary

4

## Aspects of Attention

Chun et al. (2011)

- Limited Capacity
  - Environment Presents More Information Than Can Be Processed
- Selection
  - Multiple Stimuli Compete for Attention
- Modulation
  - Facilitates/Inhibits Processing
- Vigilance
  - Sustain Attention Over Period of Time

5

## Architecture of Attention 1

Chun et al. (2011)

- External
  - Sensory Modality
  - Spatial Location
  - Temporal
  - Features and Objects
- Internal
  - Task and Response Selection
  - Long-Term Memory
  - Working Memory

6

### Architecture of Attention 2

Prinzmetal & Landau (2010)  
After Posner (1978) and Wundt (1902)

- Voluntary (Endogenous)
  - Paid to External Cue
    - Goal-Directed
      - External and Internal
  - Affects Accuracy and Response Latency
- Involuntary (Exogenous)
  - Captured by External Cue
    - Stimulus-Driven
      - External Only
  - Affects Only Response Latency

7

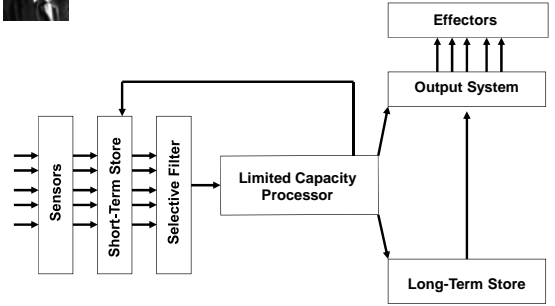

### Early Studies of Attention and “Short-Term” Memory

- Span of Apprehension (Woodworth)
  - Air Traffic Control
  - Telephone Numbers
- Applications
  - Attention is Limited
  - Attention Can Be Controlled
    - Deployed as Well as Captured
- “First Facts”
  - Attention as the Path to Short-Term Memory
  - “Working Memory”

8

### Filter Model of Attention

Broadbent (1958)

9

### Dichotic Listening

Cherry (1953)

- The Cocktail-Party Phenomenon
- Shadowing
- Memory for Unattended Channel
  - Switch in Language
  - Switch between Forwards and Backwards
  - + Switch between Male and Female Voice

10

### Filter Theory of Attention

Broadbent (1958)

- Attention as a Bottleneck or Filter
- Sensory memory
  - Icon, Echo, etc.
- Attend to Single Communication Channel
  - Serial Information Processing
- Selection Based on Perceptual Features
  - Semantic Analysis After the Bottleneck
- Attention is Flexible
  - Attentional Processing is Serial

11

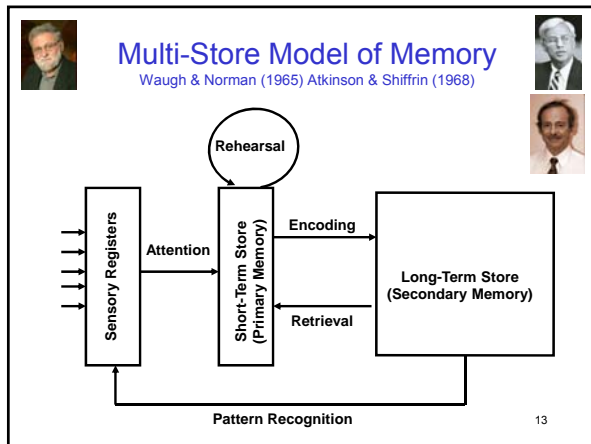

### Filter Theory: Implications for Consciousness

Broadbent (1958)

- Perceptual Analysis is Unconscious
  - Can Occur Preattentively
- Semantic Analysis Requires Consciousness
  - Must Occur Post-Attentively

Preattentive = Preconscious = Perceptual  
Attentive = Conscious = Semantic

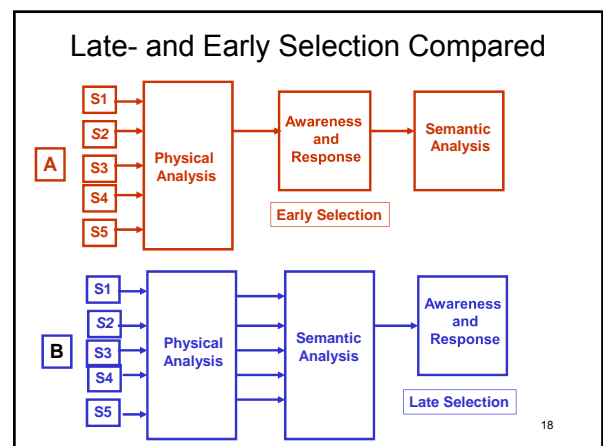

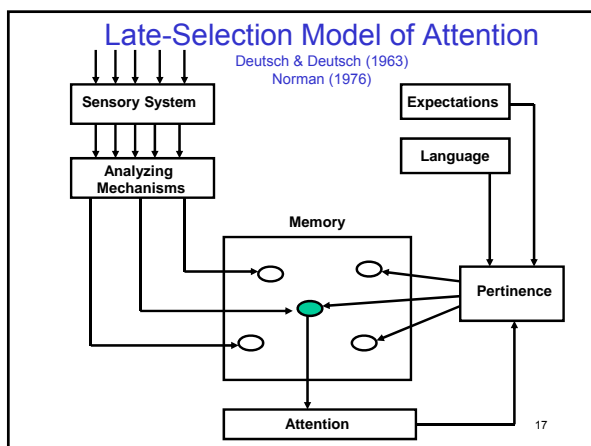

12

- ### Problems with the Filter Model
- Moray (1952)
    - Attention to One's Own Name
  - Treisman (1960)
    - Shift Shadowed Message Between Ears
  - Preattentive Semantic Analysis
    - Can Go Beyond Physical Structure
- 14

- ### Modified Filter Theory
- Treisman (1964)
- 
- Attenuator, Not Filter
  - Contextual Tuning
  - Attention Not Determined by Physical Attributes Alone
    - Goals
    - Signal-Detection Theory
  - *Cognitive* Theory of Attention
    - Bottom-up vs. Top-down processing
    - Stimulus vs. Meaning
- 15

- ### Late-Selection Theories
- Deutsch & Deutsch (1963); Norman (1968)
- 
- 
- Abandon the Filter**
- Input Channels Processed in Parallel
  - Attention Based on *Pertinence*
    - Required for Response Selection
    - Not for Input Selection
  - Implications for Consciousness
    - Preattentive Analysis is Complete
      - Includes Meaning as well as Structure
- 16

### Problem: Extent of Preattentive Processing

- Analysis Without Conscious Attention
  - Limited to Perceptual Structure?
  - Extends to Semantic Meaning?

19

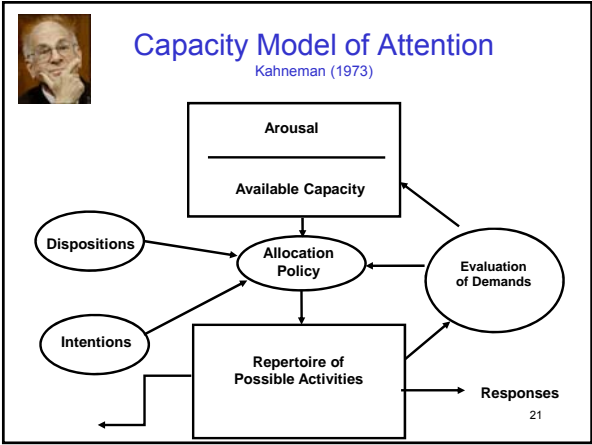

### Capacity Theory of Attention Kahneman (1973)

- Attention = Mental Effort
  - Arousal
- Cognitive Resources are Limited
- Determinants of Allocation Policy
  - Automatic Enduring Dispositions
  - Conscious Momentary Intentions
- Attention and Task Demands
  - Undemanding, Parallel
  - Demanding, Serial

20

### Views of Attention and Automaticity

- Traditional View
  - Elementary Processes are Preattentive
    - Performed Unconsciously or Preconsciously
  - Complex Processes Must Be Post-Attentive
    - Performed Consciously
- Revisionist View
  - Elementary Processes Can Be Preattentive
    - Performed Unconsciously or Preconsciously
  - Complex Processes Can Be Unconscious Too
    - So Long As They Are Performed Automatically

22

### Automaticity in Skilled Performance

LaBerge & Samuels (1974); LaBerge (1975)

- Many Complex Tasks Cannot be Performed Consciously
- Some Components of Skilled Performance Must be Unconscious
- Definition of Automaticity
  - Immediately Processed into Long-Term Memory
    - Even if Attention is Deployed Elsewhere

23

### Automaticity in Reading Hierarchical Coding of Stimulus Input

Graphemic Information      I S R Q P

↓

<ul style="list-style-type: none"> <li>• Feature Detectors</li> <li>• Letter Codes</li> <li>• Spelling-Pattern Codes</li> <li>• Word Codes</li> <li>• Word-Group Codes</li> </ul>	<ul style="list-style-type: none"> <li>• Intrinsically Automatic</li> <li>• Initially Effortful</li> <li>• but Automatized</li> <li>• Through</li> <li>• Practice</li> </ul>
---	--

24

## Attention and Automaticity

Kahneman (1973)

- Identification of Consciousness with Attention
  - Preattentive = Preconscious
    - Early Selection: Perceptual, Physical
    - Late Selection: Semantic, Meaning
- Attention Redefined as Mental Effort
  - Automatic Processes Don't Require Effort
    - Executed Outside Scope of Conscious Attention
      - No Conscious Awareness
      - No Conscious Control
  - Sources of Automatization
    - Innate
    - Extensive practice

25

## Automaticity Defined

Bargh, "Four Horsemen of Automaticity" (1994)  
After LaBerge & Samuels (1974); Posner & Snyder (1975);  
Schneider & Shiffrin (1977); Schiffrin & Schneider (1977)

- Inevitable Evocation
- Incorrigible Completion (Ballistic)
- Efficient Execution
- Parallel Processing
- Unconscious in the Strict Sense of the Term
  - Operate Outside Phenomenal Awareness
  - Operate Outside Voluntary Control

26

## Automaticity Extended

Hasher & Zacks (1979, 1984)

- Inevitable Evocation, Efficient Execution
- No Improvement with Training or Feedback
- No Individual Differences
- Age Invariance
- Independent of Arousal

27

## Roots of Automaticity

- Innate Behaviors
  - Reflex, Taxis, Instinct
- Conditioned Responses
  - Classical Conditioning
  - Instrumental (Operant) Conditioning
- Automaticity Acquired Through Learning
  - Extensive Practice with Task
- But Can't Be Overcome
  - Even with Extensive Practice (?)

28

## Dual-Process Theories in Psychology

Chaiken & Trope (1999); Smith & DeCoster (1999, 2000)

- Conscious or Effortful or Controlled
  - Symbolically Represented Rules
    - Structured by Language, Logic
    - Learned in One Trial (or Very Few)
  - Conscious
    - Optional, Depending on Capacity, Motivation
    - Conscious Awareness of Steps in Processing
- Automatic or Unconscious
  - Associative
    - Structured by Similarity, Contiguity
    - Learned Over Many Trials
  - Automatic (As Defined Previously)
    - Preconscious, with Conscious Awareness of Result

29

## Two Systems in Judgment and Decision-Making

Kahneman, *Thinking, Fast and Slow* (2011)

- System 1
  - Automatic, Fast, Unconscious
  - Heuristic, "Hot"
    - Emotions, Stereotypes
- System 2
  - Controlled, Slow, Conscious
  - Algorithmic, "Cold"
    - Logical, Systematic
- System 1 Wins the Race

30

## Controlled and Automatic Conscious and Unconscious Components in Task Performance

Jacoby (1991);

- Tasks Cannot be Classified as Automatic or Controlled
- Every Task has Automatic and Controlled Components
- How to Separate Them Experimentally?

31

## Age Differences in Memory

Schoenfeld & Robertson (1966); Schoenfeld & Stones (1979)

32

## Controlled and Automatic Conscious and Unconscious Components in Memory

Mandler (1980); Jacoby (1991)

- Recall a Function of Retrieval
  - Conscious, Deliberate, Controlled
- Two Processes in Recognition
  - By Retrieval
    - Item Consciously Remembered
  - By Familiarity
    - Item Automatically “Rings a Bell” (Priming)
- Aging Impairs Conscious Recollection
  - But Spares Unconscious Priming

33

## Priming Effect on Stem-Completion

- Study list of Words *density*
- Stem-Completion Test
  - Old studied targets *den* \_\_\_\_\_
  - New unstudied lures *nec* \_\_\_\_\_

34

## Method of Opposition

Jacoby (1991)

- Study list of Words *density*
- Stem-Completion Test
  - Old studied targets *den* \_\_\_\_\_
  - New unstudied lures *nec* \_\_\_\_\_
- Inclusion Condition
  - Complete each stem with item from study list
    - or, the first word that comes to mind *density*
- Exclusion Condition
  - Complete each stem with any item *except* one from the study list *dentist* <sup>35</sup>

## Age Differences in Memory

Jacoby et al. (1997)

36

## Process Dissociation Procedure

Jacoby (1991)

- Inc =  $C + A(1 - C)$ 
  - Inc =  $p$  Targets Produced on Inclusion task
  - C =  $p$  Targets Consciously Recognized
  - A =  $p$  Targets Automatically Generated
  - $(1 - C)$  =  $p$  Targets *Not* Consciously Recognized
- Exc =  $A(1 - C)$
- C = Inc - Exc
- A = Exc /  $(1 - C)$

37

## Automatic and Controlled Components in Age Differences in Recognition

Jacoby et al. (1997)

Group	Inc	Exc	C	A
Young	.76	.26	.44	.46
Old	.55	.39	.16	.46

The age difference in recognition is due to age differences in the *conscious, strategic* component of recognition. <sup>38</sup>

## Components of Processing in Stem-Completion

Jacoby et al. (1997)

39

## 20-Year Retrospective of PDP

Yonelinas & Jacoby (2012)

- Many Applications Beyond Memory
- Criticisms of “Process Independence”
  - Processes May be Redundant/Embedded
  - May Need Multinomial Model (>2 Processes)
- But Converging Evidence
  - Outcomes as Predicted by Process-Independence
  - Alternative Measures of A and C in Memory
    - Remember/Know Judgments
    - Signal-Detection Theory

40

## Cognitive Perspective on Social Interaction

- Importance of the *Perception* of the Situation
  - Impression Formation
    - Person Perception
  - Attribution Theory
    - Causal Explanation
  - Impression Management
    - Strategic Self-Presentation

**Traditional Focus:**  
Conscious/Deliberate Thought

41

## Revisionist Views of Social Interaction

### Reaction to “Cold, Calculating, Deliberation”

- “Hot” Cognition
  - Emotion, Motivation Independent of Cognition
  - Emotion, Motivation Shape Cognition
- Automaticity
  - Situational Influences on Social Interaction
    - Interpretation of Situational Influences as Priming
  - Social Behavior Largely Automatic in Nature

42

## “The Automaticity of Everyday Life”

Bargh (1984)

“As Skinner argued so pointedly, the more we know about the situational causes of psychological phenomena, the less need we have for postulating internal conscious mediating processes to explain these phenomena.”

43

## Automaticity in Social Behavior

- Most Social Behavior is Automatic
  - Triggered by Environment
  - Preattentive/Preconscious Processing
- Internal Mental Representations of the Situation are Constructed Automatically
  - Perception “Dumped” in Consciousness

44

## Interruptions of Experimenter

Bargh et al. (1996), Experiment 1

- Cover Task: Scrambled Sentences
  - “Rude” Primes
    - *aggressively, rude, bother, disturb, intrude*
  - “Polite” Primes
    - *respect, honor, considerate, appreciate, patiently*
  - “Neutral” Primes
    - *exercising, flawlessly, occasionally, rapidly, gleefully*
- Experimenter Engaged with Confederate
  - Ignores Waiting Subject
- Interruptions During 10-Minute Waiting Period

## Interruptions of Experimenter

Bargh et al. (1996), Experiment 1

46

## Preconscious Analysis of Situation

Bargh (1984)

- Situational Effects
- Social Perception
- Perception-Behavior Interface
- Evaluation
- Evaluation-Behavior Interface
  - Social Ignition, not Social Cognition*

47

## Auto-Motive Model of Social Behavior

Bargh (1990)

- Traditional Model
  - Conscious Selection of Intended Behavior
  - Automatic Execution of Intention
    - Revised Model Automates Selection Process
- Goals and Motives Automatically Invoked
  - Operate Outside Awareness

48

## The Automaticity Juggernaut

Kihlstrom (2008)

- Social Behavior Largely Automatized
  - Conscious Percepts, Goals, Emotions Irrelevant
    - Automatically Triggered by Preconscious Analysis
- Consciousness is an Afterthought
  - Give Plausible/Acceptable Reasons for Behavior
- We Are All Zombies After All
  - Not Because Zombies are Conscious Too
    - Dennett
  - But Because Consciousness is Epiphenomenal
    - Plays No Causal Role in Behavior

49

## “The Automaticity of Everyday Life”

Bargh (1997, p. 1)

“[T]he more we know about the situational causes of psychological phenomena, the less need we have for postulating internal conscious mediating processes to explain these phenomena....

[I]t is hard to escape the forecast that as knowledge progresses regarding psychological phenomena, there will be less of a role played by free will or conscious choice in accounting for them....

That trend has already begun..., and it can do nothing but continue.”

50

## “Is Consciousness Riding into the Sunset?”

Bargh (1997), p. 50, 52

“Automaticity pervades everyday life, playing an important role in creating the psychological situation from which subjective experience and subsequent conscious and intentional processes originate....

I emphatically push the point that automatic, nonconscious processes pervade all aspects of mental and social life, in order to overcome what I consider dominant, even implicit, assumptions to the contrary.

51

## The Unbearable Automaticity of Being

Bargh & Chartrand (1999, p. 462)

“[M]ost of a person’s everyday life is determined not by their conscious intentions and deliberate choices but by mental processes that are put into motion by features of the environment and that operate outside of conscious awareness and guidance.”

52

## “Naturalization” and Freud’s Sorrow

- Copernicus
  - Earth is not Center of Universe
- Darwin
  - Man is Just Another Animal
- ~~Freud~~
  - Man is Fundamentally Irrational
- Bargh
  - Man is (Virtually) a Conscious Automaton

Stages of Naturalization

The Birth of the Myth

Freud: Sorrow, sorrow, and stages of consciousness of the natural and conscious processes that have shaped the way we think about ourselves in relation to the world.

Copernicus: Earth is not the center of the universe.

Darwin: Man is just another animal.

Freud: Man is fundamentally irrational.

Bargh: Man is (virtually) a conscious automaton.

Ohme (2009) 53

## Unconscious Thought Theory

Dijksterhuis & Nordgren (2006)

- Choice Among Several Alternatives
  - Differ Along Several Dimensions
- UT Superior for Complex Choices
  - Greater Processing Capacity
  - Unconstrained by Attentional Bottleneck
  - More Accurate/Reliable Weighting of Features
    - Less Biased by Contextual Influences (e.g., Availability)
  - Conscious Thought Emphasizes Features Currently in Attentional Spotlight

54

## Automaticity Pervades Social Cognition

Bargh et al. (2012)

- Postconscious (Goal-Dependent) Automaticity
  - Dependent on Prior Conscious/Intentional Thought
- Preconscious Automaticity
  - Unconscious Inputs to Conscious Processes
  - Direct Activation of Goal Pursuit/Social Behavior

55

## The Automaticity Principle

Huang & Bargh (2013)

- Doubts About Conscious Control
  - Power of Situational Influences
  - Limits of Introspective Access
  - Dual-Process Models
- Effects of Unconscious Processes
  - How a Person Perceives the World
  - How a Person Behaves in Response

56

## A Softening of Views?

Bargh et al. (2012)

- “Any process of sufficient complexity to be of interest to social psychologists involves a complex interplay between both controlled (conscious) and automatic processes.” (p. 601)
- “Conscious thought is causal and it often puts automatic processes into play; similarly, automatic processes regularly cause and influence conscious thought processes. These two fundamental forms of human information processing work together, hand in glove, and indeed one would not be able to function without the other.” (p. 602)

57

## The False Fame Effect

Jacoby et al. (1989)

- Study List of Nonfamous Names
  - Memory Test
- 24 Hours Later, Make Fame Judgments
  - Famous, Nonfamous Names
- Previously Studied Nonfamous Names are Now Judged to be Famous
- Explanation
  - Study Primes Names on Judgment Task
  - Priming Increases Availability
    - Biases Judgments of Fame
  - Influence of Priming is Automatic

58

## Components of Processing in Fame Judgments

Jennings & Jacoby (1993)

59

## Spontaneous Trait Inferences

Uleman et al. (2005)

- Study Photos of Strangers
  - Paired with Behavioral Description
- 2 Days Later, Make Trait Judgments
  - Old, New Photos
- Old Photos Receive Trait Attributions in Line with Behavioral Descriptions
- Behaviors Prime Relevant Traits
  - Priming Increases Availability
- Influence of Priming is Automatic

60

## Components of Processing in Spontaneous Trait Inferences

Uleman et al. (2005)

61

## The Weapon Bias

Payne (2001)

- Identification Task: Weapon or Tool?
- Primed with Black or White Faces
- Priming Effects
  - Faster to Identify Gun after Black Prime
    - Faster to Identify Tool after White Prime
  - More Misidentification of Tools as Guns
- Faces Prime Racial Stereotypes
  - Stereotype Primes Related Judgment
- Influence of Priming is Automatic

62

## Components of Processing in the Weapon Bias

Payne (2001); Payne et al. (2005)

No Deadline

63

## Components of Processing in the Weapon Bias

Payne (2001); Payne et al. (2005)

500 msec Deadline

64

## Behavior -- It's Involuntary

Park, *American Psychologist* 1999, p. 461

"We perceive ourselves to have far more control over our everyday behavior than we actually do...."

[T]he source of behavioral control comes not from active awareness but from... mental activations of which we are unaware and environmental cues to which we are not consciously attending that have a profound effect on our behavior.

[T]hese articles represent... fundamental breakthroughs in the understanding of motivations, free will, and behavioral control."

65

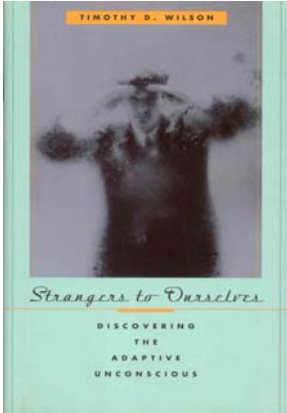

## Automaticity in the Brain

Blakeslee (2002)

"[T]he brain systems that detect and evaluate [biological and social] rewards generally operate outside of conscious awareness. In navigating the world and deciding what is rewarding, humans are closer to zombies than sentient beings much of the time."

66

**TIMOTHY D. WILSON**

*Strangers to Ourselves*

DISCOVERING THE ADAPTIVE UNCONSCIOUS

Wilson (2002), pp. 6-7

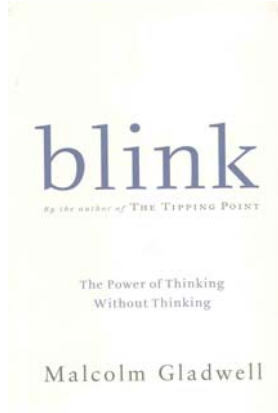

67

“...Freud’s view of the unconscious was far too limited. When he said... that consciousness is the tip of the mental iceberg, he was short of the mark by quite a bit – it may be more the size of a snowball on top of that iceberg.”

“The mind operates most efficiently by relegating a good deal of high-level, sophisticated thinking to the unconscious....”

“The adaptive unconscious does an excellent job of sizing up the world, warning people of danger, setting goals, and initiating action in a sophisticated and efficient manner.”

“It is a necessary and extensive part of a highly efficient mind.”

**blink**

By the author of *THE TIPPING POINT*

The Power of Thinking Without Thinking

Malcolm Gladwell

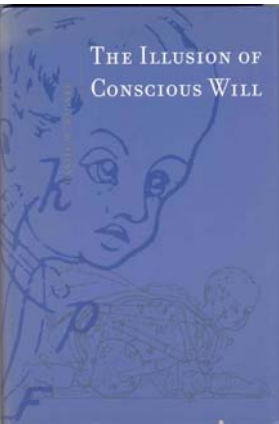

Gladwell (2005), p. 11

68

“The part of our brain that leaps to conclusions... is called the adaptive unconscious, and the study of this kind of decision making is one of the most important new fields in psychology.”

“The adaptive unconscious is not to be confused with the unconscious described by Sigmund Freud, which was a dark and murky place filled with desires and memories and fantasies that were too disturbing for us to think about consciously.”

“This new notion of the adaptive unconscious is thought of, instead, as a kind of giant computer that quickly and quietly processes a lot of the data we need in order to keep functioning as human beings.”

**THE ILLUSION OF CONSCIOUS WILL**

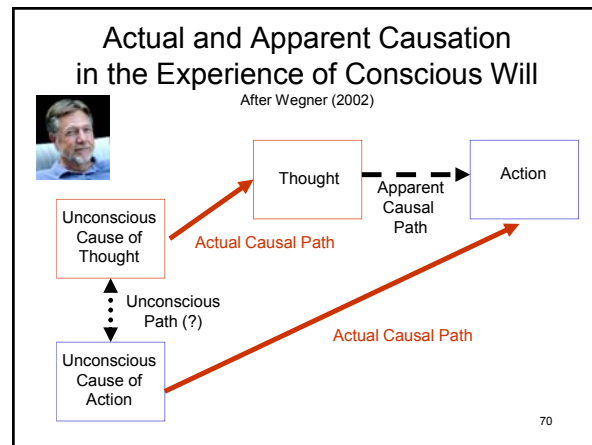

Wegner (2002), p. 97

69

“...[T]he real causal mechanisms underlying behavior are never present in consciousness. Rather, the engines of causation operate without revealing themselves to us and so may be unconscious mechanisms of mind.”

“Much of the recent research suggesting a fundamental role for automatic processes in everyday behavior (Bargh 1997) can be understood in this light.”

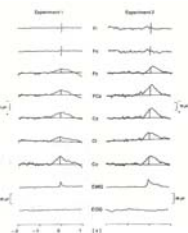

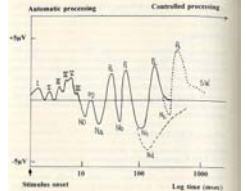

“The real causes of human action are unconscious, so it is not surprising that behavior could often arise-- as in automaticity experiments --without the person’s having conscious insight into its causation.”

### The Readiness Potential (*Bereitschaftspotential*)

Kornhuber & Deecke (1965, 1990)

- Event-Related Potential
  - Recorded in EEG
  - 800 msec Prior to Movement

“The electro-physiological sign of planning, preparation, and initiation of volitional acts” (1990, p. 14)

71

### The Readiness Potential Precedes the Conscious Wish

Libet et al. (1983)

- “Clock-Time” Method
  - Light Revolves 1/2.56 seconds
  - Move Finger
  - Note First Awareness of Wish to Act
- Timing of Voluntary, Spontaneous Acts
  - Awareness of Wish → Act – 200 msec
  - RP → Awareness of Wish – 350 msec

72

## Two Types of Readiness Potential

Banks & Pockett (2007), after Libet (1985)

Figure 51.1 Schematic diagram of a readiness potential (RP) showing decision time (W) and reported time of movement (M) relative to the time of the EMG for movement at 0 ms.

Type II Readiness Potential:  
The Predecisional Negative Shift

73

## “Time-On” Theory of Consciousness

Libet et al. (1983); Libet (1985, 2002, 2006)

- Neuronal Activities Mediate Unconscious Mental Events
- Unconscious Mental Events Become Conscious Only If They Persist for an Adequate Time ( $\approx 500$  msec)
- Behavior is Instigated Unconsciously
- Conscious Control as “Veto”
  - “Veto Window”  $\approx 200$  msec

74

## Critiques of the Libet Experiment

Banks & Pockett (2007)

- Replications
- Variability
- Sources of Error
  - In Determining Onset of Readiness Potential
  - In Determining Onset of Conscious Wish
- Ecological Validity
  - Action is Inconsequential
  - Important Decision Has Already Been Made

75

## The Clock Confound

Miller et al. (2011)

- Movement Not Truly Spontaneous
- Subjects Must Watch the Clock
- Compare RPs in Two Conditions
  - Replicate Libet’s Experiment
    - Watch Clock, Report Decision Time
  - Simply Make Spontaneous Movement
    - Ignore Clock, No Reports

76

## The Clock Effect on the Predecisional Negative Shift

Miller et al. (2011)

77

## Conclusions Concerning the Predecisional Negative Shift

Miller et al. (2011)

- Artifact of Attention Paid to Clock
  - Watching Clock, Recording Decision Time
- Does Not Indicate Unconscious Initiation of “Voluntary” Behavior
- Does Not Show that Conscious Will is Illusory
  - (Though Maybe It Is)

78

## The Automaticity Argument

- **Experimental Evidence:** Automatic Processes Play Some Role, Under Some Conditions, in Social Cognition and Behavior.
- **Theoretical Conclusion:** Automatic Processes are Pervasive, and Consciousness is Largely an Afterthought.
  - But Does Not Follow From the Evidence

79

## Sources of the Automaticity Juggernaut

Kihlstrom (2008)

- “Conscious Shyness”
  - Epiphenomenalism

"The Scorpion" built 1891 (Filmore & Western Railway, California)

“The consciousness of brutes would appear to be related to the mechanism of their body simply as a collateral product of its working, and to be completely without any power of modifying that working as the steamwhistle which accompanies the work of a locomotive engine is without influence upon its machinery.” T.H. Huxley (1868)

80

## Sources of the Automaticity Juggernaut

Kihlstrom (2008)

- Positivist Reserve
- Physics Envy
  - “Pinball” Determinism
    - “Free Will” Cannot Enter into Closed Causal Sequence
- Alliance of Social Psychology with Behaviorism
  - Traditional Definition as Study of Social Influence
  - Situationism
    - Explain Behavior in Terms of Stimulus
    - Avoidance of Mediating Conscious processes

81
