

Transformation is the inward, metabolic process in which God works to spread His divine life and nature throughout every part of our being, particularly our soul, bringing Christ and His riches into our being as our new element and causing our old, natural element to be gradually discharged. As a result, we will be transformed into His image (2 Cor. 3:18), that is, conformed to the image of the firstborn Son of God as His many brothers (8:29). Thus we will be suitable for the building up of His Body.
